the production of carbon dioxide from the oxidation of fossil carbon over the past 200 years has resulted in the accumulation of co₂ in the atmosphere co₂ like other greenhouse gases slows the rate at which infrared radiation is emitted from the earth by increasing the concentration of co₂ in the atmosphere humanity is altering the earth s radiation balance in potentially dangerous way mitigating humanity s impact on earth s climate system requires transforming the global energy infrastructure to decrease anthropogenic emissions of co₂ the body of work presented here covers a range of physical and chemical topics important for the mitigation of anthropogenic climate change through the capture and storage of carbon dioxide this book is focused primarily on addressing co₂ emissions from large stationary point sources through co₂ capture and storage a portion of the work however is aimed at addressing the long tail of the co₂ point sources distribution by removing co₂ directly from the atmosphere the entire ccs supply chain from the thermodynamic limit of the work required the capture of co₂ from power plants to the long term chemical and physical evolution of carbon dioxide
